#### What is "Serverless"

Methodology

Serverless architectures are application designs that incorporate third-party "Backend as a Service" (BaaS) services, and/or that include custom code run in managed, ephemeral containers on a "Functions as a Service" (FaaS) platform.

Serverless architectures may benefit from significantly reduced operational cost, complexity, and engineering lead time, at a cost of increased reliance on vendor dependencies and comparatively immature supporting services.

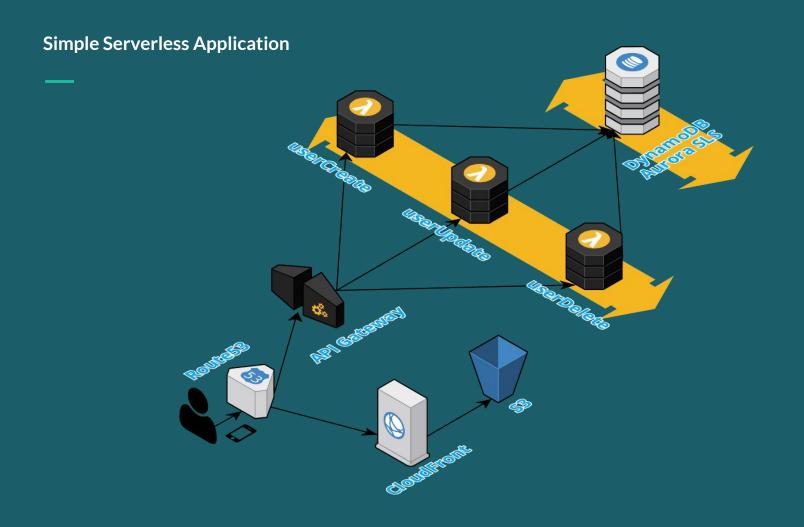

MARTIN FOWLER

# Serverless Serverless ServiceFull

# Serverless Traits from AWS Lambda

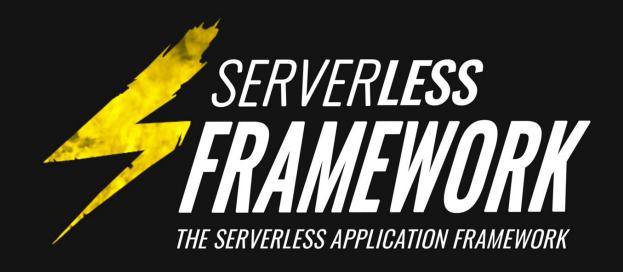

- Microservices
- Zero Administration
  - Auto-scaling
  - No Monitoring
  - No OS / Security Updates
- Pay per Execute
- Event Driven
- Interoperable with other managed services

# OK, that all sounds great. So then what's MISSING?

**Slack Notifications** 

# All managed via GitOps (GitHub)

#### rc-234

INFINITE number of dynamically deployed environments

prod

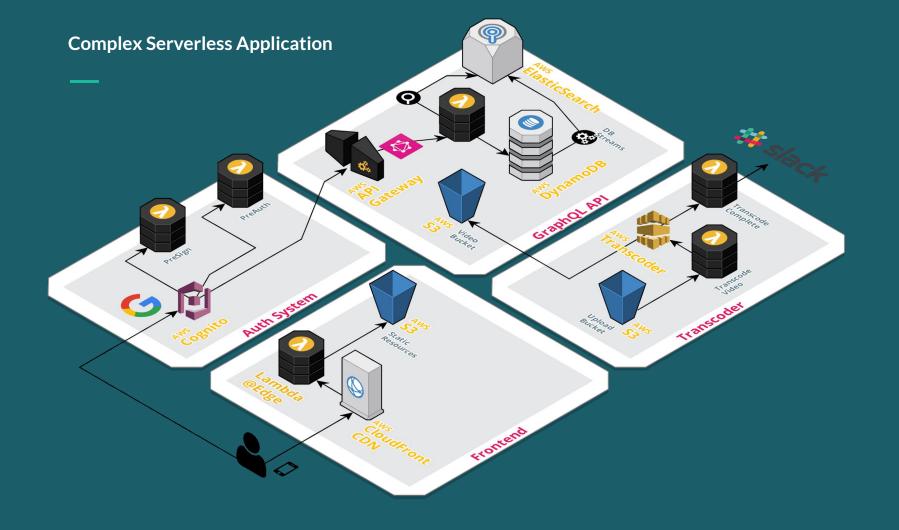

qa-2

dev feat-tree feat-blue rc-234 qa-2

## Each environment needs a PREDICTABLE URL

branch--service.klickstuff.com feat-thing--projectx.klickstuff.com

## Many of those environments can be COMPLEX...

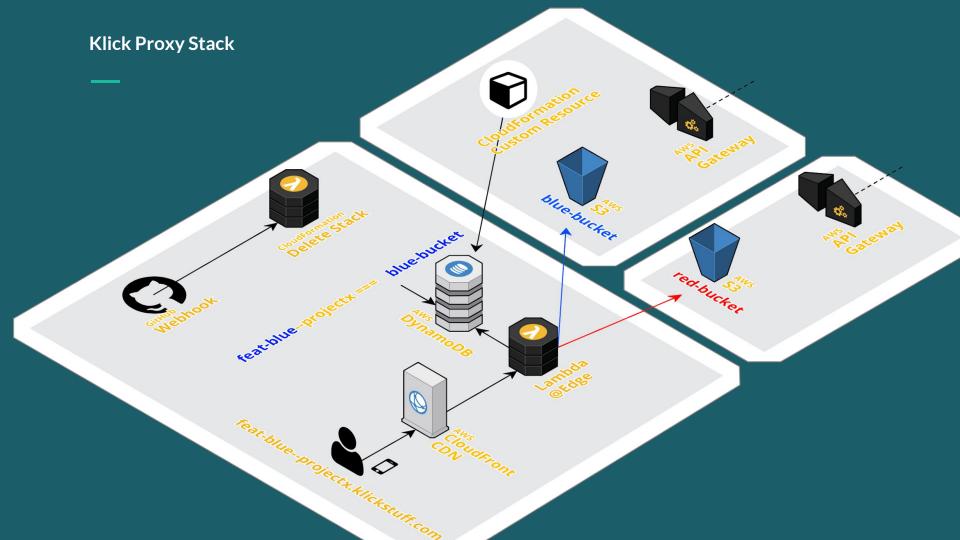

# ...and things have to deploy FAST VERY FAST

...and we we're almost there until we saw CloudFront deploy times

## ~30 mins

## Proxy Stack Anatomy

- Build Harness Container
  - NodeJS
  - Yarn
  - o AWS CLI
  - Serverless CLI
- Proxy Stack
  - o CDN, DDB, Lambda@Edge
- Custom Resource (Stack Entry)
  - o AWS Lambda
- Demo Project
  - Declares Stack Entry
